

# PSS4000 – Syslog

To get more information we need the syslog of the PSS.

Notice to activate, PAS must run at the background.

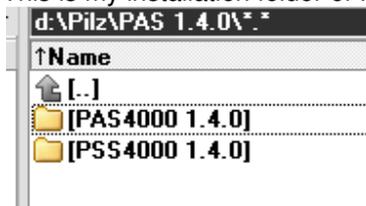

Please extract the attached files into a folder:

Open the syslog ini file and correct the path of the PAS installation folder. Notice: insert the PSS4000 subfolder

```
Listner - [E:\PSS4000SyslogControl\PSS4000SyslogControl.ini]
Datei Bearbeiten Optionen Hilfe
#root directory of the PSS4000 Runtime installed by PAS4000 (must have the
subdirectory \bin with the PSS4000_FirmwareStarter.exe in it)
D:\Pilz\PAS 1.4.0\PSS4000 1.4.0
```

This is my installation folder of PAS 1.4.0

```
d:\Pilz\PAS 1.4.0\
↑Name
[-.]
[PAS4000 1.4.0]
[PSS4000 1.4.0]
```

The store folder is named at the syslog\_datei\_start.bat. I configured it, that the information is stored at c:\

```
Listner - [E:\PSS4000SyslogControl\syslog_datei_start.bat]
Datei Bearbeiten Optionen Hilfe
@echo off
echo Pruefe Existenz von D:\temp...
if exist c:\nul goto start
md d:\temp
:start
echo Starte Syslog-Protokoll in Datei c:\syslog.txt...
syslogd.exe > c:\syslog.txt
```

Launch the dos window and execute the PSS4000SyslogControl file with the parameter "name of PLC" "IP address of PLC" -get

```
E:\>E:\PSS4000SyslogControl\PSS4000SyslogControl.exe AC002 172.16.209.33 -get
*** INTERNAL TESTVERSION, no warranty for any unexpected behaviour *****
PSS4000 Syslog Control R5 Version 0.8

#####
GET-Command Response:
#####
Syslog is currently disabled
Syslog Server IP: 127.0.0.1
Syslog Server Port Number: 514
Syslog Severity level: 5
E:\>
```

Now change the Syslog Server IP address by the command ...exe "name of PLC" "IP address of PLC" -set " IP Address of PC"

```
Syslog Server Port Number: 514
Syslog Severity level: 5

E:\>E:\PSS4000SyslogControl\PSS4000SyslogControl.exe AC002 172.16.209.33 -set syslogserverip 172.16.214.141

*** INTERNAL TESTVERSION, no warranty for any unexpected behaviour *****
PSS4000 Syslog Control R5 Version 0.8

#####
GET-Command Response:
#####
Syslog is currently disabled
Syslog Server IP: 172.16.214.141
Syslog Server Port Number: 514
Syslog Severity level: 5

E:\>
```

Now activate the syslog Server by the command -activate : ....exe "name of PLC" "IP address of PLC" -activate

```
E:\>E:\PSS4000SyslogControl\PSS4000SyslogControl.exe AC002 172.16.209.33 -activate

*** INTERNAL TESTVERSION, no warranty for any unexpected behaviour *****
PSS4000 Syslog Control R5 Version 0.8
Copyright (c) 2011 PILZ GmbH & Co KG, all rights reserved

Syslog is now activated on device AC002

E:\>
```

Check settings with command -get

```
E:\>E:\PSS4000SyslogControl\PSS4000SyslogControl.exe AC002 172.16.209.33 -get

*** INTERNAL TESTVERSION, no warranty for any unexpected behaviour *****
PSS4000 Syslog Control R5 Version 0.8
Copyright (c) 2011 PILZ GmbH & Co KG, all rights reserved

#####
GET-Command Response:
#####
Syslog is currently enabled
Syslog Server IP: 172.16.214.141
Syslog Server Port Number: 514
Syslog Severity level: 5

E:\>
```

Now Restart the PSS4000 and start the bat file.

```
E:\>  
E:\>  
E:\>  
E:\>E:\PSS4000\SyslogControl\syslog_datei_start.bat
```

```
C:\WINDOWS\system32\cmd.exe  
Pruefe Existenz von D:\temp...  
Starte Syslog-Protokoll in Datei c:\syslog.txt...
```

Notice: this window must stay open. If you close it, the syslog capture is stopped.

At c:\ the syslog.txt file is created and filled with the needed information.

 <b>setup</b>	<b>log</b>	<b>4.372 06.02.2003 17:57 -a--</b>
 <b>syslog</b>	<b>txt</b>	<b>123 28.10.2011 09:16 -a--</b>
 <b>tmuninst</b>	<b>ini</b>	<b>21 03.05.2011 10:53 -a--</b>

If the problem occurs please send us the syslog file.
